#### Description

Strawberry Guava is an indica dominant hybrid strain (70% indica/30% sativa) created through crossing the powerful [Strawberry Banana](#) X [Papaya](#) strains.

Named for its mouthwatering flavor, Strawberry Guava packs a heady and relaxing high that will have you feeling lifted for hours on end. Like its name suggests, Strawberry Guava packs a sweet and fruity strawberry flavor with hints of tropical guava upon exhale.

The aroma is very similar, although with a dank pungent effect that fills any room with its heavy stench as the nugs are broken apart and burned away. The Strawberry Guava hits you almost as soon as you exhale, filling your brain with an expansive and lifting euphoria. You'll feel totally relaxed mentally as a sense of creativity and of sociability washes over you, lending itself well to any conversation that you may have at hand.

As your mind flies higher and higher, a calming body high will settle into your bones, leaving you slightly couch-locked and pretty hungry at times.

Combined with its high 18-30% average THC level, these effects give Strawberry Guava an edge in treating those suffering from conditions such as chronic stress or anxiety, asthma, depression, chronic pain and [PTSD](#).

This bud has small and fat rounded dark olive green nugs with thin light orange hairs and a coating of tiny frosty white crystal trichomes.
